

I can't afford a data team. Claude Code made that irrelevant.

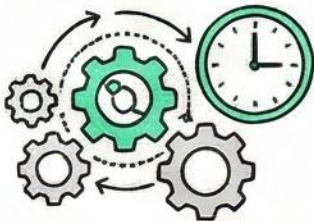

My first 4 weeks.
No coding background.

2/12

**What used to require
a data engineer, I
now do before lunch.**

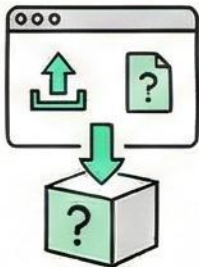

And I don't even know SQL.

ChatGPT, Gemini, Claude.ai – they live in a browser.

Upload file.
Black box processing.
Download file.
Repeat.

Still pretty manual
for data & files.

“Coding agent” sounds like it's for developers.

As a CFO, I use it like a 'data guy':
data transformation, database
management, data
analysis.

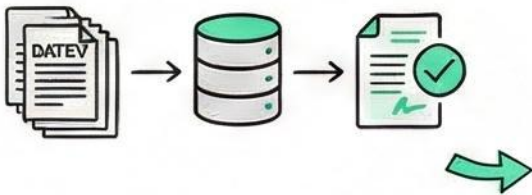

Again, I don't
even know SQL.

5/12

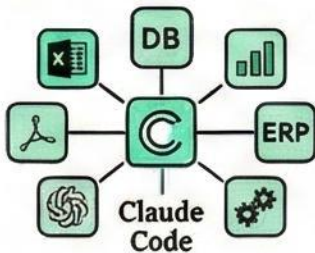

I pushed 7 years of DATEV exports into a clean SQL database.

Clean data. Proper model.
Now I prompt Claude Code and get financial reports straight from SQL.
No developer. No Excel hell.

No more jumping between Excel, database, BI, ERP, etc.

70% of my working day is in Claude Code now. One hub that orchestrates everything else. I love MCP.

7/12

Wait, what's MCP?

Model Context Protocol. 'AI APIs'.

They let Claude Code talk to my tools:
SQL database, Google Drive, n8n.

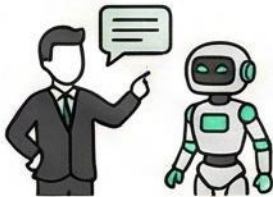

More than “just” a coding agent.

A superstar employee with finance, data, 1,000 other skills and a McKinsey brain. Definitely smarter than me. ;)

I work with Claude Code like with an employee.

I describe what I need, it plans, I approve, it executes. LOVE IT.

- plan
- approve
- execute

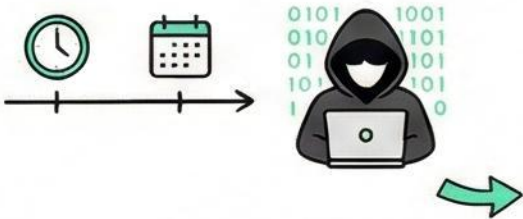

10/12

It's not plug and play.

4 hours: 'Okay, Claude Code is powerful.'

4 days: 'How do I optimize the setup?'

4 weeks: James Bond hacker vibes.
Building, building...

11/12

How to start: Install it. Use it.

You won't get the magic 'this is crazy' moment until you start using it.

YouTube links for getting started in the comments.

YouTube links in comments

12/12

I'm heavily addicted to Claude Code.

Are you already using Claude Code?
What are you using it for?
